Sources:

- Land use/land cover data were interpreted and digitized by WRC GIS staff from 1989 1:5000-scale orthophotos.

- Building locations were captured using Global Positioning System technology by microDATA, St. Johnsbury, VT for Vermont's Enhanced 9-1-1 program. Data on building use is from microDATA field surveys and the Town of Putney. These data have been edited by WRC to improve the accuracy of their locations. Data are current to 2003.

- Surface waters were digitized from 1974 1:5000 orthophotos by the University of Vermont's School of Natural Resources under contract with OGIS (VGIS data layer SWnnn). The data have been attributed and have received limited editing by Windham Regional Commission.

- Town highway locations were digitized from 1989 1:5000 orthophotos by Greenhorne & O'Mara Inc. under contract with OGIS. Some road locations were updated by microDATA using GPS during data collection for Enhanced 9-1-1. Other road locations were corrected by WRC GIS staff using rights-of-way locations as shown on the VGIS 1:5000 PARCEL coverage. Information for these latter corrections were provided by officials from the Town of Putney.

- Town highway attributes (i.e. class and pavement) are from AOT highway maps. These data were corrected by WRC GIS staff using information provided by officials from the Town of Putney.

- Road names data were provided by the Town of Putney.

- Railroad data were taken from VGIS data layer RR. These data were developed by digitizing railroad centerlines from 1:5000 orthophotos.

- Electric transmission lines are taken from VGIS ELTRN data layer. They were digitized from 1:5000 orthophotos by Greenhorne & O'Mara Inc. under contract with OGIS.
